

PASP User Manual

Version 0.4.1

1. Introduction

PASP is a lightweight, local statistical analysis tool designed for the terminal. It is optimized for mobile environments like Termux but works on any system with Python.

2. Installation

General:

```
pip install git+https://github.com/ppmena/pasp
```

3. Usage Styles

Style A: `pasp data.csv --auto`

Style B: `pasp anova data.csv var group`

4. Commands Reference

- **descriptives:**

Calculate mean, median, SD, and classify variables.

- **ttest-one:**

One-sample T-test with normality checks.

- **ttest-ind:**

Independent samples T-test with optional `--plot`.

- **anova:**

PASP: Portable Android Statistics Program - User Manual

One-way ANOVA with post-hoc comparisons.

- **regression:**

Simple linear regression analysis.

- **doctor:**

Check environment and dependencies.

- **update:**

Update PASP to the latest version.

5. Examples with Built-in Datasets

```
pasp examples/ejemplo_anova.csv --auto
```

```
pasp examples/ejemplo_ttest.csv --ttest-ind recovery_time treatment --plot
```

```
pasp examples/ejemplo_regresion.csv --regression exam_score hours_studied
```
